

Lab Assignment # 01

COURSE CODE: SE-302L

COURSE TITLE:

Software Design & Architecture

LAB ASSIGNMENT TITLE:

EODS

ASSESSMENT TABLE:

Obtained Marks	Total Marks

Submitted To: Engr. Nighat Usman.

Submitted By: Muhammad Danial.

Registration – No: 24ABSWE0021.

Semester: 4th

Date: 18-06-2026.

Dept. of Software Engineering.

UET Peshawar, Abbottabad Campus.

Instructor Sign : _____

Question:

The E-Commerce Order and Delivery System (EODS) manage product ordering, payments, warehouse processing, and delivery tracking for an online retail company.

Customers can place orders via:

- Mobile app
- Website
- Customer service call center

All orders placed via call center require confirmation through OTP verification before processing.

The system supports:

- Standard delivery
- Express delivery (extra charges apply)
- Cash on delivery (COD)
- Online payment

However, COD is not available for express international orders. Warehouse staff can only process orders that are paid or COD-confirmed. Once an order is shipped, it cannot be modified or canceled. Delivery agents can update only delivery status and cannot access customer payment details. The system generates daily sales reports and monthly logistics reports for management review.

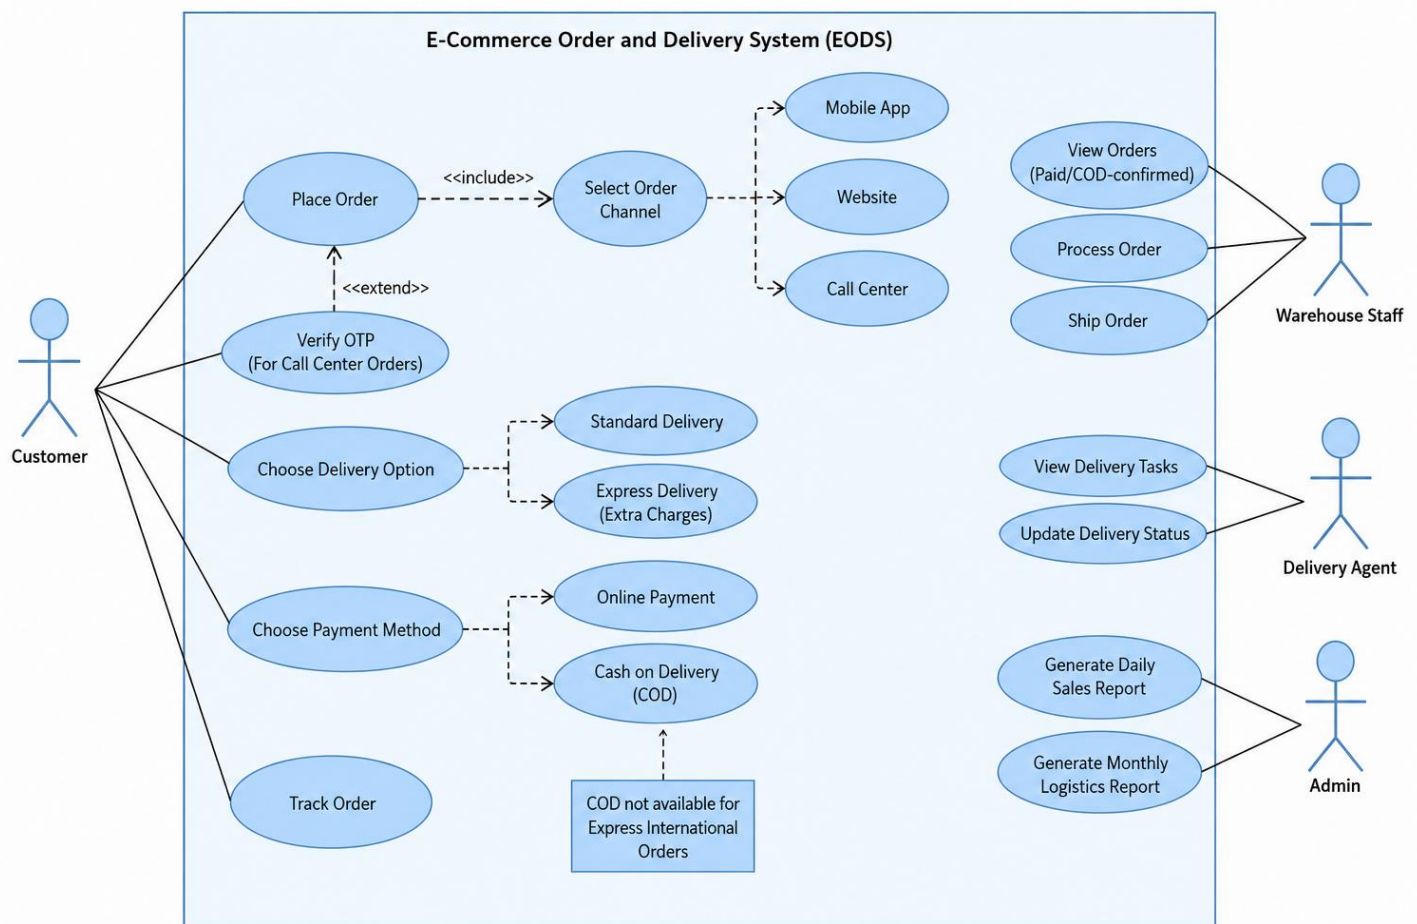

Draw the following diagrams:

a) **Use Case Diagram** for Customer, Warehouse Staff, Delivery Agent, Admin

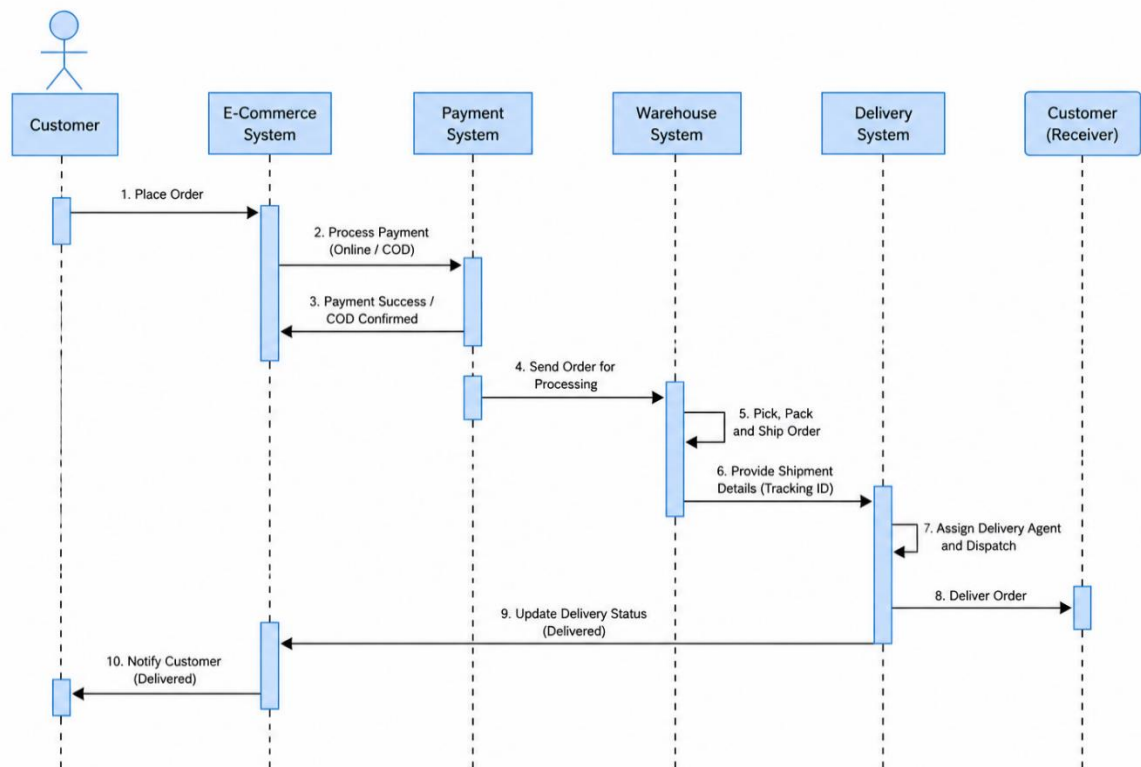

b) **Sequence Diagram** for “Order placement to delivery”

c) **Component Diagram** showing system modules
